Compliant with all UK zones

1. OVERALL CONDITION ASSESSMENT

Rating: ★★★★☆ (GOOD — Above Average for Age)

Mileage Assessment

This vehicle has covered **100,440 miles** over approximately **14 years, 11 months**, equating to an average of **6,725 miles per year**. This is **significantly below** the UK national average of 7,500–8,000 miles per year for diesel vehicles. Below-average mileage reduces wear on critical components (transmission, brakes, suspension) and indicates lower engine stress — a strong positive indicator for long-term reliability.

MOT History Analysis

Metric	Detail	Interpretation
Total MOT tests	14	Consistent with age (annual tests from year 3)
Passes	11 (78.6%)	Good pass rate
Failures	3 (21.4%)	Below average failure count for a 14-year-old car
Latest result	PASSED (30 Sept 2025)	Fresh MOT — very positive
Current advisories	3	Moderate — requires attention
MOT expiry	29 Sept 2026	Full year of MOT remaining

The **78.6% first-time pass rate** is respectable for a vehicle of this age. The UK average first-time pass rate for cars of this vintage is typically around 70–75%, so this car is performing slightly above average. The fact that the most recent MOT was passed just recently (September 2025) with only 3 advisories is a strong signal, though those advisories will need monitoring and will likely become failure items within 12–24 months.

Ownership History

Only **1 previous keeper** is recorded. Single-owner history reduces the likelihood of deferred maintenance or hidden damage from repeated trading. Fewer ownership transitions typically correlate with better service records.

Provenance — CLEAN

Check	Result	Status
Outstanding finance	None	✅ Clear
Stolen marker	No	✅ Clear
Insurance write-off	No	✅ Clear
Salvage record	None found	✅ Clear

The vehicle has a completely clean provenance. There are no financial encumbrances, no theft markers, and no write-off or salvage history. This means the buyer will receive clean title and there are no hidden liabilities that could result in the vehicle being seized or devalued.

2. VALUE ANALYSIS

Market Valuation Summary

Valuation Type	Range	Midpoint
Private sale	£2,272 — £3,212	£2,742
Trade/dealer purchase	£774 — £1,513	£1,144
Spread (private to trade)	£1,498 — £1,699	—

Context & Interpretation

If you are buying from a private seller: The fair price range is **£2,272 to £3,212**. Given the clean provenance, low mileage-per-year, single previous keeper, and fresh MOT, this vehicle sits comfortably toward the **upper-middle of the private sale range** — approximately **£2,700 to £3,000** would be a fair asking price.

If you are buying from a dealer: Expect to pay a premium of 10–20% above private sale values for dealer warranty coverage and consumer protection under the Consumer Rights Act 2015. A dealer price of **£3,200 to £3,800** would not be unreasonable.

If the seller is asking above £3,212: The vehicle is overpriced relative to market data. Use the Brego valuation as leverage.

If the seller is asking below £2,272: This is below market value — investigate the reason directly with the seller before proceeding.

Value Influencing Factors

Factor	Impact on Value	Notes
Convertible body style	**+£200 to +£500**	Convertibles command a seasonal premium, especially in spring/summer
Diesel engine (1.6D)	**-£100 to -£300**	Diesel demand has declined; urban usage concerns with ULEZ/CAZ
Manual transmission	Neutral	Standard for this model
Black colour	Neutral to slight positive	Popular colour choice
Low annual mileage	**+£100 to +£200**	Below average wear
Single previous owner	**+£100 to +£200**	Indicates careful ownership
Fresh MOT (12 months)	**+£100 to +£150**	No immediate testing costs
3 current advisories	**-£50 to -£150**	Future repair costs to factor in

Depreciation Trajectory

At 14 years, 11 months old with a value of approximately £2,700, this vehicle is well into its **depreciation floor**. MINI Cooper convertibles hold value better than many competitors due to brand desirability and iconic R57 design. **Annual depreciation is estimated at £200–£400 per year**, making it a cost-effective ownership proposition.

3. RISK FACTORS

Risk Matrix

Risk Category	Level	Detail
Mechanical reliability	🟡 MEDIUM	Age-related concerns; known R56/R57 issues
Bodywork/corrosion	🟡 MEDIUM	Convertible roof mechanism and seals are vulnerability points
Financial/legal	🟢 LOW	Clean provenance; no encumbrances
Emissions compliance	🟠 MEDIUM-HIGH	Euro 5 diesel; may face future restrictions
Parts availability	🟢 LOW	Widely available; strong aftermarket
Running costs	🟢 LOW	Very cheap tax; diesel economy
Catastrophic repair risk	🟡 MEDIUM	Some known expensive failure points

Known Issues — MINI R57 Cooper D (2011, N47 Engine)

This vehicle is powered by the **BMW/PSA N47 1.6-litre diesel engine** in the R57 (convertible) body. The following are well-documented issues to be aware of:

HIGH PRIORITY — Timing Chain The N47 diesel engine has a well-documented **timing chain tensioner and timing chain wear** issue. Failure can result in catastrophic engine damage. Symptoms include a rattling noise on cold start-up, particularly from the rear of the engine. If the timing chain has not been replaced, budget **£800–£1,500** for preventative replacement. At 100,000 miles, this is a **critical inspection point**. **Ask the seller directly whether the timing chain has been replaced and request documentary evidence.**

MEDIUM PRIORITY — EGR Valve & DPF The EGR (Exhaust Gas Recirculation) valve and DPF (Diesel Particulate Filter) are common failure points on N47 engines. EGR clogging can occur from short-journey usage patterns (typical with convertibles). DPF regeneration may be incomplete on vehicles with low annual mileage. Request a diagnostic scan to check both systems. Replacement costs: EGR valve **£300–£600**; DPF **£800–£1,500**.

MEDIUM PRIORITY — Convertible Roof Mechanism The R57's electrically operated soft top can develop issues with the hydraulic rams, microswitches, and roof fabric. Check for:

- Smooth, complete operation (open and close fully, without stalling)
- Water ingress (check carpet dampness in boot and behind rear seats)
- Fabric condition (tears, delamination, rear window clarity)
- Drain blockages (a major cause of water ingress)

Roof mechanism repair: **£500
